

Pigmentation Report

Problem Detected: Pigmentation

Uneven dark patches caused by sun exposure, hormones, or skin damage.

Solution

Laser Treatment

Helps break down deeper pigmentation and reduce patchy dark areas.
It supports a clearer, brighter, and more even-looking skin tone.

Chemical Peel

Helps remove pigmented surface layers and refresh dull skin.
It improves skin tone gradually and supports a more even complexion.

Topical Treatment

Helps control excess melanin production and reduce dark spots.
It supports brighter skin and helps prevent pigmentation from worsening.

📌 **Combination treatment may be recommended.**

Stage & What You Should Do

Early Stage

What to do:

Sunscreen + skincare routine.

Why this helps:

Prevents pigmentation from getting darker.

Moderate Stage

What to do:

Chemical peel treatments.

Why this helps:

Helps lighten visible pigmentation.

Advanced Stage

What to do:

Laser treatment.

Why this helps:

Targets deep pigmentation for better results.
